The results presented in this table were obtained from samples of candies collected from individuals, and at the wholesale or retail level. In each case where detected lead levels are reported, the source of lead contamination is uncertain. The amount of lead in a particular brand or type of candy may vary greatly from sample to sample based on the manufacturing techniques and/or ingredients used, and/or the handling of the candy after its manufacture, including handling by the consumer. Some manufacturers may have made changes to their production processes and/or ingredients, so the results reported above may not accurately reflect the lead levels, if any, in the products of these manufacturers currently on the market. Data presented in this table is for informational purposes only, does not include all candies, and represents lead levels only in the candy samples tested.

(1) Laboratory: NFL – National Food Laboratory, FD - Food and Drug Laboratory

(2) Date of sample analysis, environmental sampling or sample receipt.

(3) The current state and federal regulatory limit for lead in candy is 0.5 parts per million (ppm). ND denotes that the test result was below the level of detection for the method used and that this ND level was less than 0.5 ppm and in some instances as low as less than 0.01 ppm. * Denotes that the sample was below the detection limit for the sample at the time of that analysis and that the analysis detection limit exceeded 0.5 ppm.
